BIONIC PRINCIPLE AND DESIGN CONCEPT

The three-dimensional design of the ring main ditch is adopted to ensure the wet drainage of tires and improve the handling and braking performance of the wet and slippery road surface. The groove transition is smooth and has the effect of effectively preventing the groove bottom from cracking. Unique tread formula design can effectively reduce rolling resistance, reduce fuel consumption and improve driving mileage. At the same time, it can reduce the emission of exhaust gas and make it more environmental friendly. Some specifications of the carcass are increased to improve the safety during driving.
